N. B. The Author has made a great Progress in a Third Volume, containing the Geometrical Plans of the most considerable Gardens and Plantations, with large Perspectives of the most regular Buildings, in a Method intirely new, and both instructing and pleasant. The Specimens are to be seen at Mr. Smith's in Exeter-Exchange in the Strand.

A N

EXPLANATION

Of all the

PLATES in the Second Volume.

White-hall, as design'd by Inigo Jones, from p. 2. to p. 19, inclusive.

AFTER much Labour and Expence, I have at last procured these excellent Designs of *Inigo Jones* for *White-hall*, from that ingenious Gentleman *William Emmet* of *Bromley*, in the County of *Kent*, Esq; from whose Original Drawings the following five Plates are publish'd, whereby he has made a most valuable Present to the Sons of Art. In the First is the General Plan of the *Piano Nobile*, which contains six Courts; that next the Park is an exact Square of 245 Foot, of each Side are two Squares of 250 by 125, being two Squares. The Middle Court next the River is 125 by 85, being a Diagonal; and the two Side-Courts this Way are so proportioned, that the Length and Breadth are as 5 to 3. So that here is a Variety of excellent Proportions, and all the Apartments are disposed either for State or Conveniency, those to the River being most proper for the Summer Season, and those to the Park for Winter, having the *South-West* Sun. I have omitted the Ground Plan, which may be easily collected from this and the general Section. The second Plate is the Front to the Park, where is the *Banqueting-House*, with a Chapel corresponding to it: In the Middle is a noble Entry, after the manner of a double Triumphal Arch; the Angles are terminated with two lofty Towers of an elegant Composition, and two *Cupola's* crown the Building. Our Artichect has dress'd the Front with the *Ionick* and *Corinthian* Orders: In the third is the Front to the *Thames*, the Orders are *Dorick* and *Ionick*, as most proper for this Situation, with great Variety of *Venetian* Windows; the Towers are the same as in the first and in the other Fronts: In the fourth is the Front to *Charing-Cross*, with a noble *Dorick* Arcade; the Superior Order is *Ionick*, and all the Ornaments are beautiful, graceful and significant; the Front to *Westminster* being the same, is here omitted. In the fifth Plate is the general Section, which discovers the three principal Courts, the great *Piazza's*, and Height of the different Stories.

Covent-Garden, p. 20, 21, and 22.

I Have made one single and one double Plate of this noble Square, which, for the Grandeur of Design, is certainly the first in *Europe*. In the first Plate is the general Plan of the *Piazza*, the Plan, Section, and *West* Front of that elegant Church, the only Piece the Moderns have yet produced, that can admit of a just Comparison with the Works of Antiquity, where a Majestick Simplicity commands the Approbation of the judicious. In the double Plate are two Elevations of the great *Piazza Westwards*, and of the Church to the *East*; the Aspect is *Antes*, the Or-

der is *Tuscan*, *Tetrastile* *Areostile*: The *Rustick* Arcade round the Square is of an excellent Composition, the Arches are 10 Foot wide, and 20 high, the Piers are 4 Foot in Front, which is two Fifths of the Arch, and 8 at the Angles; above the Arcade is one grand Story and an Attick; the Windows are dress'd with a regular Entablature, in Width are equal to the Piers, and two Diameters in Height; the Attick Windows are under the Square. It were to be wish'd our Artificers wou'd observe this just Proportion in Piers and Windows, which wou'd prevent the *Lanthorn* Way of Building, so much in Practice of late Years.

The Royal-Exchange, p. 23, 24, and 25.

THIS Structure was rais'd soon after the Fire of *London*, in the Year 1666; and however inferior to those Pieces of *Inigo Jones*, yet may very justly claim a Place in this Collection, being the most considerable of this Kind in *Europe*. I have made one single and one double Plate: In the first is the Plan, containing 205 Foot by 180; the second is the principal Front to *Cornhill*; in the Middle is a Piece of the *Corinthian* Order, with a very bold Arch, and two small ones of each Side; from this riseth a lofty Tower, compos'd of three Orders: The *Rustick* Arcade in this Building is generally condemn'd by the Criticks for having Piers but one fourth of the Arch, which renders it weak.

Bow Steeple, p. 26.

I Have brought the Plans, Section and Elevation of this Tower into one Plate, and of this Kind 'tis esteem'd one of the best in the Kingdom.

A Design for a Church of my Invention, p. 27.

THE Aspect of this Church is *Prostyle*, *Hexastile*, *Eustile*, which by *Vitruvius*, *Palladio*, and the general Consent of the most judicious Architects, both Ancient and Modern, is esteem'd the most beautiful and useful Disposition, being a Medium between the *Picnostile* and *Areostile*; the first being too close, and the last too open. The Order is *Ionick*; and in one Plate I have given four Designs: In the first is the Plan, where the Cella is 54 by 74, which is a Diagonal Proportion; the Side Walls are six Foot thick, and with three more for the Columns, amounts to nine Foot, which is one Sixth of 54, and the whole Width being 72, the two Walls make one Fourth of the same. The second Design is the Side of the Church, where I have abstained from any Ornaments between the Columns, which would only serve to enflame the Expence, and clog the Building. In those admirable Pieces of Antiquity, we find none of the trifling, licentious, and insignificant Ornaments, so much affected by some of our Moderns. The Ancients placed their chief Beauties in the Justness of the Intercolumnations, the precise Proportions

A

tions

tions of the Orders, and the Greatness of Parts; nor have we one Precedent either from the *Greeks* or *Romans*, that they practised two Orders, one over another, in the same Temple in the Outside, even in the most considerable, much less to divide it into little Parts; and whereas the Ancients were contented with one continued Pediment from the Portico to the Postico, we have now no less than three in one Side, where the Ancients never admitted any. This Practice must be imputed either to an entire Ignorance of Antiquity, or a Vanity to expose their absurd Novelty, so contrary to those excellent Precepts in *Vitruvius*, and so repugnant to those admirable Remains the Ancients have left us. The third Design is the Front, where I have also abstained from any unnecessary Ornaments, the Door is dress'd after the best Models of Antiquity. The fourth is the Section, which shews the Elevation of the Inside, and Manner of the Vaulting; the whole Height is 54, equal to the Width, and that being divided into four Parts; one of them determines the Height of the Vault, and the three other Parts are given to the perpendicular Wall. In the *East* End I have made a *Venetian* Window, which will sufficiently illuminate the whole Church: Here I have practised an *Ionick* Pilastrade with Niches, and over them enriched Compartments.

York Stairs, p. 28.

THIS Gate was erected by the first Duke of *Buckingham*, when Lord High Admiral of *England*, Anno 1626, by *Inigo Jones*.

Cobham Hall in Kent, p. 29, 30.

WAS the Seat of the Dukes of *Lenox* and *Richmond*, now of the Lady *Theodosia Blyth*, and *John Blyth Esq*; 'Tis a large ancient Fabrick, and has one Front by *Inigo Jones*, with a *Corinthian* Pilastrade, and an Attick of the highest Proportion and Balustrade; the great Hall is two Stories high.

Cholmondeley Hall in Cheshire, p. 31, 32, 33 and 34.

IS the Seat of the Earl of *Cholmondeley*, of which I have made four Plates; the first is the general Plan of the first Story, being a large Quadrangle open to the *North*: The second is the *North* Front dress'd with a *Corinthian* Pilastrade, and a proper Balustrade: The third is the *South* Front with the same Ornaments; and the last is the *West* Front with six $\frac{1}{2}$ Columns. The whole Fabrick was rebuilt and finished in a sumptuous manner in the Year 1715: Here are fine Gardens, and all is agreeable to the Magnificence of the noble Patron.

Eaton Hall in Cheshire, p. 35 and 36.

THIS Seat of Sir *Richard Grosvenor Bart.* in two Plates; the first contains the general Plan of the Offices and principal Story, which is very handsome and commodious: In the Plan one may observe a great Regard to State and Conveniency, the Size of the Rooms being judiciously varied, and generally the Rules of Proportion are maintained in all the Apartments: In the second Plate is the Front of the House and Offices, the Corners are dress'd with Rusticks of a good Taste, and the Fabrick is crown'd with a *Cupola*.

Belton in Lincolnshire, p. 37, 38.

THIS is the Seat of the Lord *Tirconnell*, in two Plates; the first contains the Plans of the two principal Stories, where are many very good Apartments, noble and convenient: The second is the Front, in which the Windows are handsomely dress'd with Architrave, Frieze and Cornice, and the whole Composition is regular; here are curious Gardens, a large Park, and many other Improvements.

But above all, the polite Literature, the great Civility, and uncommon Generosity of the Patron, deserve to be transmitted to Posterity.

High-Meadow in Gloucestershire, p. 39, 40.

THIS Seat of the Lord *Gage*, in two Plates; the first contains the Plans of the two principal Floors; the second is the Front, which has a noble Entry, the Windows are well dress'd, but the Piers are too narrow, and in the Wings the large Space from the Window to the Corner has a good Effect.

A new Design for Tobias Jenkyns Esq; p. 41, 42.

I HAVE inscribed this small Essay of my Invention to this ingenious Gentleman, whose Knowledge in the most polite Learning is equal to his extream Modesty, in endeavouring to conceal what so many do falsely assume, and his particular Attachment to Architecture must draw a deep Respect from all that profess any Love or Esteem for that useful and noble Art. In the first Plate is the Plan of the first Story, extending 120 Foot; here is the double and single Cube, the Hall being 27 by 54; here is 18 by 27, which is the *Sesqui altera*, and 21 by 27, the *Sesqui tertia*; and you pass gradually from the larger to the lesser. Right against the Entry I have placed the great Pair of Stairs, which is free and spacious, and leads up to the principal Story, which is the same with the first, excepting that the Salon, which is over the Hall, is 27 Foot high, and has two Degrees of Windows; the two Pair of Back Stairs go from the Foundation to the Top, and will serve all the Apartments: In the second Plate is the Front with a Rustick Basement, and two Orders of Pilasters in the Theatrical, which admits of more Gaiety than is proper either for the Temple or Palatial Stile.

Boddington Place in Surrey, p. 43, 44, 45.

IS the ancient Seat of Sir *Nicholas Carew Bart.* of which I have made three Plates; the first contains the Plans of the two principal Floors, where is a very noble Hall; in Height two Stories, and many large and spacious Apartments: In the second is the *West* Front, dress'd with a composite Pilastrade, and other Ornaments: The third Plate is the Garden Front; and tho' more plain, yet has a good Effect, by reason of the large Solids between the Windows. The House stands in a large Park, the Gardens are very curious and artful, the Orangery is esteemed the best in the Kingdom; here is great Plenty of excellent Water, with Canals and Cascades; and indeed every Thing is truly worthy of so generous a Patron, who has spared no Cost to rebuild and embellish his Seat.

Mr. Hudson's House at Sunbury in Middlesex, p. 46.

I HAVE given the general Plan of the first Floor and Offices, with the general Front, in one Plate; the Apartments are handsome, the Furniture sumptuous, and the Offices commodious; and tho' there is but little Ornament in the Outside, the Materials being good, and the Work well executed, it makes a fine Appearance: Here are fine Gardens with a charming Prospect to the *Thames*; it was design'd and conducted by Mr. Fort, Anno 1712.

Mr. Waller's House in Beaconsfield, p. 47.

I HAVE also given the general Plan of the Offices and first Floor, with the general Front, in one Plate; the Offices are joined to the House, with a handsome Corridore of the *Corinthian* Order, designed by *Thomas Milner Esq*; Anno 1712.

Mr. Rooth's House at Epsom, p. 48, 49.

IN the first Plate you have the Plans of the first and second Story, and in the second is the Front, and tho'

tho' but of small Extent, yet is most conveniently laid out and well finished.

Melvin House in Scotland, p. 50.

THE Seat of the Earl of *Lewin*. In this Plate I have given the Plan of the principal Story and Front: Here is a very good Salon with two noble Apartments, with two convenient Back Stairs; it was design'd by the most experienc'd Architect of that Kingdom, Mr. *James Smith*, Anno 1692.

Mr. Campbell's House at Glasgow, p. 51.

Daniel Campbell, of *Shawfield*, Esq; has built this House, after my Design, in *Glasgow*, the best situated, and most regular City in *Scotland*: The principal Apartment is in the first Story, the Staircase is so placed in the Middle as to serve four good Apartments in the second Story; the Front is dress'd with Rusticks of a large Proportion, and a *Dorick* Cornice and Balustrade; the Garrets receive Light from the Roof inwardly; the whole Building is of good Stone, and well finished, Anno 1712.

A New Design for a Person of Quality in Somersetshire, p. 52, 53, 54, 55.

THE first Plate presents you with the general Plan of the Offices and principal Floor raised ten Foot above the Court, which lands in a Portico, from thence to a noble Sale and Salon, and of each Side a grand Apartment: The second Plate is the principal Front, adorned with a *Corinthian* Tetrafile and Pediment: The third is the Garden Front, and the last is one End with a fine *Venetian* Window, with several other Embellishments, all design'd by the learned and ingenious Sir *John Vanbrugh*, 1716.

Maiden Bradley in Wiltshire, p. 56.

IS the Seat of Sir *Edward Seymour* Bart. In this Plate I have given the general Plans of the two principal Stories, both of the Offices and best Apartments, with the Elevation of the Fronts; the Windows of the first are well dress'd with Pediments, and the second have Windows with Architrave, Frieze and Cornice only: It was begun by the late Sir *Edward*, and finished by the present in a handsome Manner.

Hampton Court in Herefordshire, p. 57, 58.

IS the ancient Seat of the Lord *Coningsby*, built by *Henry IV.* King of *England*, when he was Duke of *Hereford*, above 300 Years past, which is the oldest Building in this Collection: His Lordship has lately repaired it with great Expence and Magnificence; here are seven very noble Apartments richly furnished, with many convenient small ones; here are also fine Gardens, a large Park, a well stock'd Decoy, and all other Advantages both for Pleasure and Conveniency, and truly worthy of so noble and polite a Patron.

Shobden Court in Herefordshire, p. 59, 60.

THE Seat of Sir *James Bateman*, Knt. Lord Mayor of *London*, of which I have made two Plates; the first contains the Plan of the principal Floor, where is a lofty Hall, in Height two Stories, and four good Apartments: The second is the Front with rustick Corners and a Pediment: Sir *James* is now improving his Gardens and Plantations, with many other Embellishments, as lasting Monuments of his Magnificence.

Wilton, from p. 61 to p. 67, inclusive.

THIS is the ancient Seat of the Earls of *Pembroke* and *Montgomery*, begun in the Reign of *Henry VIII.* The great Quadrangle was finished in the Time of *Edward VI.* and the Porch was design'd by *Hans Holbin*. The Hall Side being burnt

about 12 Years ago, was rebuilt by the present *Thomas* Earl of *Pembroke*, then Lord High Admiral of *England*, in a very noble and sumptuous Manner. The other Parts rebuilt by the first *Philip* Earl of *Pembroke*, who was Lord Chamberlain, being all designed by *Inigo Jones*, and finished by him in the Year 1640, are what I have here published, one double and 5 single Plates. In the first are the Plans of the two principal Floors, with the Garden Front 194 Foot long, which is justly esteemed one of the best Pieces of that great Architect: 'Tis universally acknowledged that the grand Apartment is one of the noblest Architecture has yet produced, particularly the Sale and Salon, whose Sections I give in the following Plates. In the first you have the Section of the Sale, long 60 Foot, high 30, and in Breadth the same; in one end of the Room is the celebrated Family Picture by *Vandyke*, 20 Foot long, and 12 high, containing 13 Figures as big as the Life, which rather appear as so many real Persons than the Production of Art, and all the other Pictures in the Section are of the same incomparable Hand; in the second Plate is first the Section of the same Room towards the great geometrical Stair-Case, the first of this kind in the Kingdom, with a rich and magnificent Door-Case; in this Plate is also the Section of the Salon, which is a Cube of 30 Foot: In both these Rooms, and in most of the other Apartments, are Marble Chimney Pieces of the most exquisite Work, and most elegant Composition I have seen in the Kingdom, all carved in *Italy*, and brought over by the first *Philip* Earl of *Pembroke*, with many curious Statues, *Basso Relievo's*, and other Things of Marble, and Pictures of the most famous Masters. The third is the Loggio in the Bowling-Green, with an *Ionick* Arcade; the Pilasters are most beautifully rusticated, and the Design is enriched with Niches and Statues: In this Plate also is the Grotto, the Front being curiously carved without, and all Marble within, having black Pillars of the *Ionick* Order, with Capitals of white Marble, and four fine *Basso Relievo's* from *Florence*. In the same Plate is one Side of a Rustick *Ionick* Door, in the Garden whereof there are two fronting each other two ways. The fourth is the Stables, disposed in a very handsome Manner. The fifth is a Rustick Gate, which may serve for a Model to direct our Workmen on the like Occasion; the Columns frosted on each Side this Gate are on the Stable-Bridge. There remains so much to be said of this charming Place, that to give a true Account of it would require an entire Volume of a much more artful Pen; but I hope this will be accepted of by the candid Reader as sufficient from me, till I publish my Third Volume in Perspective, where I intend a more ample Description.

Longleate, in Wiltshire, p. 68, 69.

THE Seat of the Right Honourable the Lord Viscount *Weymouth*, founded by Sir *John Thynne*, the great Restorer of that ancient and honourable Family, in the Reign of *Edward* the Sixth, and of this Date is esteemed to be the most regular Building in the Kingdom, being above 160 Years ago. In one double Plate I have given first the Plans of the two principal Floors, where is a noble Hall in Height two Stories, the Apartments are numerous, large and sumptuous; in the third Story, not here designed, is a spacious Gallery, and in the same Line a very curious Library, in all 220 Foot long, besides 4 handsome Apartments in the Gallery. In the Library is an excellent Collection of the best Authors of the most correct Editions, with many rare and valuable Manuscripts. The Front is of a large Extent, being 220 Foot long, and adorned with three Orders of Pilasters, the *Dorick*, *Ionick*, and *Corinthian*, with their proper Pedestals; the Proportions of each Order, their Intercolumnation and gradual Diminution is duly observed, and the Fabrick is crowned

crowned with a handsome Balustrade, several Cupola's and Statues, erected by the late Lord; who also greatly adorned this Seat by the noble Gardens, Fountains, Canals, perpetual Cascades, curious Plantations, and many other magnificent Monuments of his Grandeur.

Cliefden House, in Buckinghamshire, p. 70, 71, 72, 73, and 74.

THE Seat of the Right Honourable the Earl of Orkney, founded by the late Duke of Buckingham, but greatly improved and adorned by the present noble Patron, who, after the dangerous Fatigues of thirty Campaigns, (*forſan & hæc olim meminiffe juvabit*) with immortal Honour to himself and Country, has now the Pleasure of this delightful Retreat, when the Buſineſs of his King and Country does not call for his Service. I have made one ſingle and two double Plates; in the firſt is the general Plan of the Offices and firſt Story, the Apartments are noble, richly furniſhed, and commodious. Here is one of the moſt conſiderable Terraces in the Kingdom, being 24 Foot above the Parterre, and is as high as the Level of *Windſor* Caſtle, and is 433 Foot long, adorned with a curious Baluſtrade of *Portland* Stone; under the great Court in Front are arched Corridores, that communicate from one Side of the Offices to the other; a thing of great Uſe and Conveniency: Here is alſo a curious Grotto, with a great Number of large and ſpacious Vaults, and many other ſubterraneous Conveniencies. The ſecond and third Stories contain many fine Apartments magnificently furniſhed. The ſecond Plate is the chief Front to the North, having the Offices joined to the Houſe by Corridores of the *Ionick* Order, deſigned by Mr. *Archer*. The third Plate is the South Front with the fore-named Terraces, which affords one of the moſt beautiful Proſpects in the Kingdom.

Hopeton-house, in Scotland, p. 75, 76, and 77.

IS the Seat of the Right Honourable the Earl of Hopeton. The Deſigns were given by Sir *William Bruce*, who was juſtly eſteem'd the beſt Architect of his Time in that Kingdom; it was begun about the Year 1698, and finiſhed four Years after. I have made one ſingle and one double Plate; the firſt contains a general Plan of the Offices and firſt Story, where is a Portico, Hall, and four very handsome Apartments; in the middle is a Geometrical Octagon Stair-Caſe, which leads up to the ſecond Story, and over the Hall is a noble Salon, and the ſame Number of Apartments as below, and all well finiſhed and ſumptuouſly furniſhed. The ſecond Plate gives the general Front of the Houſe and Offices, the whole being executed in very good Stone; the Windows are well-proportion'd, and handſomely dreſt; the Faſſade is ruſticated in the *French* Manner, and finiſhed with Rail and Baluſtrade, Statues, Vaſes, and a Stone Cupola over the great Stair-Caſe.

Lowther Houſe in Weſtmoreland, p. 78, 79, and 80.

THE Seat of the Right Honourable the Lord Viſcount *Lonsdale*, in one ſingle and one double Plate. The firſt is the general Plan of the Offices and principal Story, extending 337 Foot: Here are ſtately Apartments, Corridores, large Galleries, a noble Library and Chapel. In the ſecond Plate you have the general Front, in Height three Stories; the Windows of the middle Story are dreſt with Pediments in a very handsome manner; the Fabrick is finiſhed with a Baluſtrade, Figures, and Vaſes, and a large Pediment at each End, which has a good Effect: Here are fine Gardens, a noble Park, and many other uſeful and magnificent Improvements, anſwerable to the Grandeur of ſo noble and generous a Patron.

Braman Park, in Yorkſhire, p. 81 and 82.

THE Seat of the Right Honourable the Lord *Bingley*. In one double Plate is firſt the general Plan of the principal Story, extending 240 Foot, including the Pavilions. The ſlooping Terraces leads up to the grand Floor, where is a noble Hall, an exact Cube of 30 Foot, moſt artfully decorated, and all the Apartments are ſpacious and convenient; above is an Attick Story for the Family, and two Stair-Caſes that are very well illuminated by raiſing the inward Walls above the Leads. The Front is of an elegant, tho' plain Manner, with a regular Cornice and Baluſtrade; the Pavilions are joined to the Houſe with two *Tuſcan* Colonades. Here are curious Gardens laid out with great Judgment, and all the other additional Improvements were happily finiſhed by the noble Patron, Anno 1710.

A new Deſign inſcrib'd to Mr. Walpole, p. 83 and 84.

IN this Deſign of my Invention, I have endeavour'd to introduce the *Temple* Beauties in a private Building. The Plan of the principal Houſe is a Square of 100 Foot. In the Ground Story, which is 20 Foot high, the Hall under the Salon is divided with four Columns, both to ſupport the Floor and proportion the Room: The Plan deſcribed here is that above, to which you aſcend by a double Stair-caſe without, which leads into a noble Salon, being a Cube of 40 Foot. Here are four Apartments, and over them is the Bed-Chamber Floor: The Offices are joined to the Houſe by two Galleries; the Towers are 40 Foot each, and the Galleries 60 Foot; ſo that the whole Extent is 300, the Houſe making one third. In the Front you have a large Ruſtick Baſement, which ſupports an Octaſtile of the Composite Order, where a lofty Pediment covers the entire Fabrick: The Towers are ſet at a convenient Diſtance, and are dreſt with a *Tuſcan* Arch and Attick; in one you have the Chapel, &c. and in the other a Library, &c. What is moſt remarkable in this Deſign is, that it has the Appearance of a large and magnificent Structure, when in Effect it is of a moderate Bigneſs, being no more than a Square of 100 Foot.

Chevening Houſe in Kent, p. 85.

THIS was the Seat of the Right Honourable the late Earl of *Suffex*, now of the Right Honourable Earl *Stanhope*, principal Secretary of State. In this Plate I have given the Plans of the two principal Stories, where the Apartments are very good, and the Rooms large and well-proportion'd; the Windows in the Front are regular, and dreſt with a proper Architrave, Frieſe, and Cornice; over the ſecond Story are Attick Windows, and a regular Entablature crowns the whole Building, and is ſaid to be deſigned by *Inigo Jones*.

A new Deſign inſcribed to Earl Stanhope, p. 86.

IN this Eſſay of my Invention I have given the two principal Plans; in the firſt is a Cube of 30 Foot, with a large Apartment on each Side, in which is a Variety both of Size and Proportions; in the Middle is a handsome Stair-Caſe, with Light from above, and behind it a Garden-Room; in the ſecond Plan are four Apartments, and a convenient Library; on each Side is a circular Pair of back Stairs, and above this is an Attick Story for the Family. The Front is richly dreſt with a large *Corinthian* Colonade of 3 Columns, and a leſſer Pilaſtrade of the ſame Order, to diſtinguiſh the two Stories; at the two Angles are two ſmall Columns, which ſupport a *Mars* and *Pallas*, as *Palladio* has done in the Palace of *Vilmarana* at *Vicenſa*; whoſe Example I think a ſufficient Authority.

Sir Charles Hotham, Bart. his House at Beverly in Yorkshire, p. 87.

AT the Desire of this worthy Gentleman I gave the following Design, who in Harvest last laid the Foundation of it and finish'd the Vaults, and intends this Summer to cover in the House with Lead. It being a Cube of 56 Foot, here are the Plans of the two principal Stories. The first is 15, the second is 13, and the third is 11 Foot high; the Proportions of each Room are all exactly figured in the Plate. In the Front the Windows of the first Story have Pediments, the next have Architrave, Frieze and Cornice, and the third has Attick Windows, all regularly drest, and at proper Distance; an Observation never to be neglected: Here is also a handsome Ionick Porch; all the Ornaments are of *Roeb Abby Stone*, being esteemed the best in the Kingdom; the Fa-
brick is crowned with a regular Cornice and Balustrade: The Offices are joined to the House by a Rustick Arch on each side, which, in my weak Opinion, has no ill Effect; and upon the whole I have endeavour'd to render it worthy of so generous and honourable a Patron.

Chester-Lee-street in the Bishoprick of Durham, p. 88.

THE Seat of *John Hedworth*, Esq; for whom I made this Design. In this Plate you have the general Plan of the principal Floor, extending 128 Foot, of which the main House has 64 and 48 Foot deep; the other half is equally divided between the Offices of each side: The Front is South, and the North Prospect not being very favourable, is the Reason why I have made no Windows in that side, but to the two Stair-Cases; the Windows in the first Story are without Pediments, the better to set off that of the Door-Cafe, but I have used them in the second Story. There being sufficient Space from the Windows to the Coines, I have drest them with large Rusticks of different Lengths, as most proper to express the true Office of those Stones, which is to cross-bind the Angles, and not as the *French*, and some others have introduced them, of the same Extent in Place of Pilasters. The Roof is flat with Cornice and Balustrade.

A new Design inscribed to Mr. Comptroller Methuen, p. 89, and 90.

I Have made two Plates of this Design: In the first are the Plans of the two principal Stories; the first is raised 6 Foot above the Court, where is a spacious Hall of 60 by 30 Foot, and in Height 21; but to preserve a due Proportion, as I have often observed, 'tis subdivided by 4 Columns into three Parts, so as the middle becomes a Square: In this Story are four very good Apartments, all exactly figured, and two pair of winding Stairs. The great pair of Stairs lead up to the *Piano Nobile*, where is a lofty and spacious Salon of the same Extent as the Hall below, but has 30 Foot in Height, which makes two Cubes: Here are 4 very handsome Apartments both for State and Conveniency, and the whole Extent of this Plan is 100 by 70 Foot. In the second Plate you have the Front in the Theatrical Stile, with a Rustick Basement supporting two, and in the middle three Orders, to give a sufficient Height to the Salon; over all the small Rooms next the Back Stairs are Interfoles.

High Wittham in Somersetshire, p. 91, 92.

THE ancient Seat of Sir *William Windham* Bart. in two Plates: First, the general Plan of the principal Floor, where is a noble and spacious Hall, with many large and handsome Apartments; and when the whole Design is finished, there will be abundance of State and Accommodation. In the second Plate is the Front to the Gardens, with a Composite

Hexastyle, which makes a beautiful *Portico* to the Court: The rest of the Front is adorned with a Pilastade of the same Order, over which is an Attick and Cupola, and many other Decorations, that sufficiently express the Magnificence of the generous Patron. Anno 1717.

Dyrham House in Gloucestershire, p. 91, 93.

THE Seat of *William Blathwayt*, Esq; First, I have given the general Plan of the principal Story, which is very large and convenient, with a Variety of very good Apartments. In the second Plate is the Garden Front extending 130 Foot; the first Story is entirely rusticated, and the Coines to the Cornice. In the second Story the Windows are drest with alternate Pediments, over which are Attick Windows, which is finished with a handsome Cornice and Balustrade, adorned with Trophies and Vases of an excellent Choice; and the learned Patron has spared no Expences in leaving such lasting Monuments of his Liberality. The Design was given by the ingenious Mr. *Talman*, Anno 1698.

Newbold-Hall in Warwickshire, p. 94.

IS the Seat of Sir *Fullwar Skipwith*, Baronet. In this Plate I have designed the Plans of the two principal Stories; in the first is a spacious Hall, in Height two Stories, with many large and convenient Apartments: In the Front the Coines are rusticated after the *French* manner, and finished with a regular Cornice, Balustrade, and other proper Ornaments. Anno 1716.

Althrop in Northamptonshire, p. 95, 96, 97.

THE Seat of the Right Honourable the Earl of *Sunderland*, of which I have made one single and one double Plate. In the first are designed the Plans of the two principal Stories, where are great Variety of noble and spacious Apartments, extending 140 Foot in Front, and deep 180. Here is a very large Stair-Cafe; and in the second Story a most magnificent Gallery 120 Foot long, richly adorned with many excellent Original Pieces of the most celebrated Painters, particularly of *Vandyke*. Here is also a most curious and valuable Library, and the whole is finished and adorned in a very sumptuous manner, answerable to the Magnificence of the noble Patron. In the second Plate I have designed the principal Front, which is drest with two Orders of Pilasters, the *Corinthian* and *Composite*, and which are continued round the whole Building; the second Order is remarkable in having no Architrave or Frieze, but only a Cornice, over which is a Balustrade. It was built by the late Earl, in the Year 1688.

A new Design inscribed to Earl Cadogan, p. 98, 99, and 100.

OF this Essay of my Invention I have made one single and one double Plate. In the first I have given the Plans of the two principal Stories, being 180 Foot in Front, and 150 deep; the first Floor is raised above the Court by four Steps, which leads into a Hall 44 Foot square, and 24 Foot high, but divided, as in my other Designs, with 4 Columns: Here are 4 large Apartments, and over the small Rooms are Interfoles. In the middle is the great Stair-Cafe 44 Foot square, with a Corridore round of 10 Foot, which is of singular Use to the whole House in passing from one Apartment to another. In the second Story, which is the *Piano Nobile*, is first a Salon an exact Cube of 44 Foot, with a very noble Apartment of each side. To the Garden Front is a large Gallery 110 Foot long, 30 broad, and in the Height the same, with a great Apartment at each End: Here are convenient Back-Stairs, and an Attick Story for the Family. The Front is in the *Palatial* Stile, where

where a large Rustick Basement supports an *Ionick* Colonnade of 7 Columns 4 Foot Diameter, and in Height 36. I have returned the Angles with Pila-

sters to strengthen the Coines; the Fabrick is crown
ed with a regular Entablature and Balustrade, and
with it I finish this Second Volume.

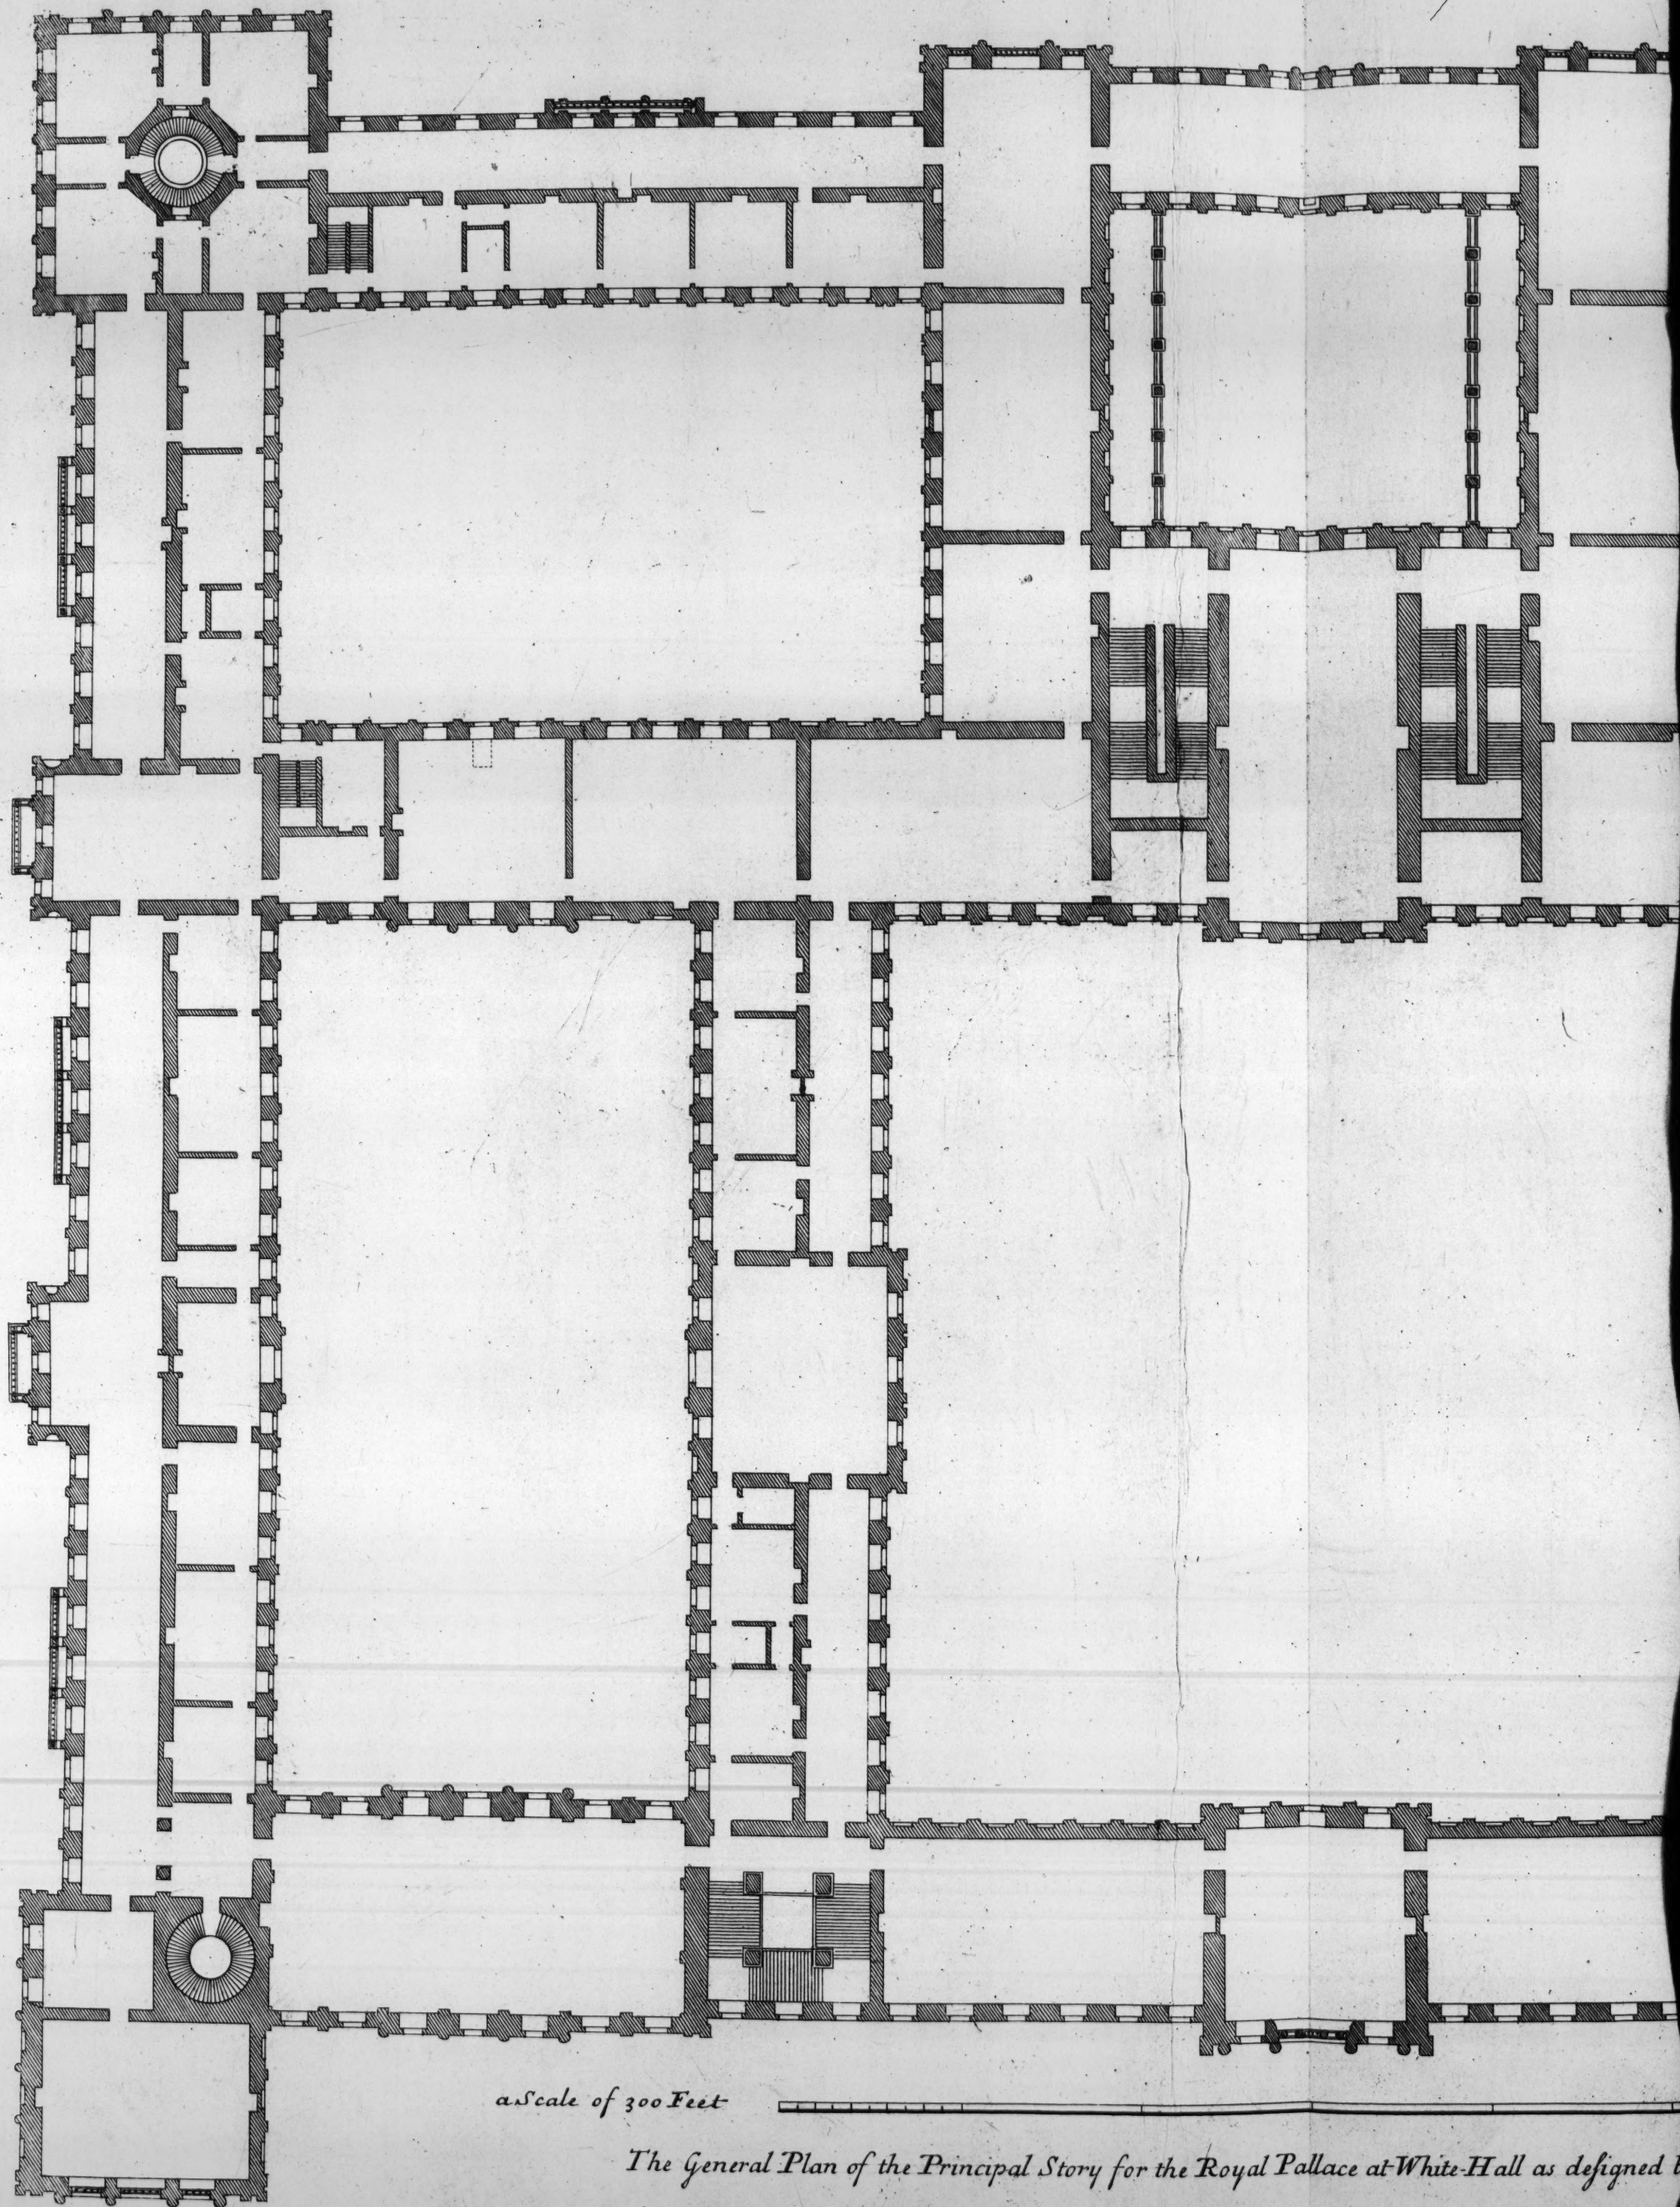

A LIST of what is contain'd in the Second Volume.
